REQUESTED SERVICES AND BUSINESS INFORMATION

1. GENERAL INFORMATION

- A. Purpose: Dane County is inviting proposals for professional engineering design services for a biogas facility at Dane County Landfill Site #2.
- B. Background: In 2009, Dane County and a local utility entered into a power purchase agreement (PPA) for renewable electricity from our landfill gas with a fixed term and increasing rates. The agreement is set to expire in 2019, and terms and rates would need to be renegotiated. Dane County anticipates the rates will drop significantly, potentially creating a County deficit of millions of dollars. Therefore, Dane County is looking to move its biogas program away from electrical generation to pipeline injection.

Dane County has already put out a separate Request for Proposal (RFP) and will soon award a Vendor contract for equipment fabrication, delivery, installation, and start-up of a biogas cleaning system for converting landfill gas into high-BTU biomethane. Due to Wisconsin's Administration Code 66.0901, Dane County is not permitted to have a design-build contract for construction of a building. Successful A/E firm hired through RFP 317025 will be required to design the building, necessary infrastructure, and site work to complete the biogas cleaning system.

Given the timeline for equipment installation and PPA deadline, time is of the essence for designing and preparing construction documents for a biogas facility.

Awarded proposer (A/E) will be required to design and prepare construction documents for all necessary work so Dane County can put a Request for Bids (RFB) out for construction. Format of RFP 317025 is outlined below regarding base and alternate proposals:

- Base Proposal – Part 1: Design biogas facility building, necessary infrastructure, and site work as outlined in Table 1;
- Base Proposal – Part 2: Design the interconnection for an international high pressure transmission natural gas pipeline as outlined in Table 2; and
- Alternate Proposal No. 1: Design for integrating additional measurement and quality controls for additional biogas sources as outlined in Table 3.

Base Proposal – Part 1: A/E must work with the Vendor to design a complete system up until the point of the biogas cleaning system or system skid. It must be understood that biogas facility design requires proprietary information from Vendor. Awarded A/E and Vendor must enter into an agreement to maintain proprietary integrity.

Base Proposal – Part 2: Interconnection must comply with all federal, state, and local government regulations and codes. A detailed list of design requirements will be provided by utility after award of contract. Utility has right to review and require revisions for interconnection design. Final design must be approved by local utility prior to RFB letting for construction.

¹Meter run defined by pipeline as a “meter tube on a skid, enclosed building, together with an isolation valve for remote isolation and automatic shut-in for gas quality tariff limits and associated instrumentation”.

²Tolerance level as defined by pipeline is 2% (FERC Gas Tariff for ANR Pipeline Company, Third Revised Volume No. 1, Section 6.12.3).

Alternate Proposal No. 1: Dane County has received several inquiries from additional off-site biogas sources. The biogas is from agricultural manure and high strength organic wastes with an average methane content of 60-65%. The company is not interested in using our biogas cleaning system. They are interested in cleaning their biogas at their site(s) and then transporting it to our site in tube trailers for injection into the transmission pipeline via our interconnect.

Alternate Proposal No. 1 includes an off-loading station from trailers including a decompression skid, separate monitoring and quality tests for each additional biogas source, and overall site and utility integration. Biogas will be transported at approximately 3,600 psig and requires decompression to 500 psig to be injected in the pipeline.

Figure 1 is a site map showing pipeline location, and proposed biogas cleaning system at Dane County Landfill Site #2. Figure 2 shows existing utility locations.

C. Design Elements:

As a way to minimize electrical costs, Dane County is studying the potential to run its existing engines and generators on natural gas from the local utility to match electrical consumption for the biogas cleaning system. This will also allow Dane County to continue heating facilities with waste gas from the engines. **Successful A/E must integrate electrical supply, if deemed feasible by Dane County.**

Table 4, outlines possible annual utility consumption ranges required for the operation of the biogas cleaning system. **Please note, these quantities are reflective of a flow up to 1,750 scfm of landfill gas.**

Table 4. Utility requirements

	Low Range	High Range
Electrical Loading (MWh/yr.)	5,000	10,000
Water Loading (gal/yr.)	400,000	3,500,000
Sewer Loading (gal/yr.)	100,000	1,000,000
Natural Gas Loading (MMBTU/yr.)	0	200,000
Waste Heat Recovery (MMBTU/yr.)	10,000	300,000

Variance in utility requirements dependent on selected biogas cleaning equipment vendor technology and sizing. By time of award of contract for A/E, County will know definitive values.

Waste is still being placed at Dane County Landfill Site #2, which is expected to be open for the next 15+ years. Based upon results from the EPA LandGem Model, total gas production will reach a peak of 2,600 scfm in approximately 2030 and continue producing biogas for the next 50 years or more. The initial biogas cleaning system is designed for a flow up to 1,750 scfm of landfill gas with a building footprint ranging from 4,000 to 10,000 square feet. **The overall biogas facility design must accommodate the expansion for increasing landfill gas volumes.**

The COUNTY Project Manager will schedule the punchlist inspection in conjunction with the User and contractors involved. The punchlist shall contain items found not to be complete, in need of correction, replacement or otherwise not in accordance with the Construction Documents. As part of the Substantial Completion verification, the A/E shall perform or witness and document functional testing and review the testing and balance report prepared by others for all plumbing, HVAC, fire protection and electrical systems to verify installation and operation meet the intent of their design. The A/E shall forward the results of the functional testing and provide written recommendations for corrective measures where systems do not meet the intent of their design. The A/E shall prepare and distribute the Certificate of Substantial Completion when appropriate.

2.G.10) COUNTY will provide a set of Construction Documents to General Contractor on which daily records of changes and deviations shall be recorded. At completion of the project, General Contractor will submit its marked-up as-built documents to the A/E who shall, based on these marked up as-built documents, revise the original documents, including the electronic files, showing changes in the work made during the construction process to produce a set of Record Documents. Electronic documents shall be in a format and on a medium required by COUNTY. This work shall be completed and submitted to COUNTY within thirty (30) calendar days of receipt of the last marked up prints. The consequences of addenda, change orders and other circumstances known by the A/E to have caused change shall be included in the production of the Record Documents. The marked-up as-built documents shall be turned over to the COUNTY at the same time as the Record Documents.
